Assignment status:

-The testings are implemented in the main method. The main methods which contains all the testing for each class, reports errors if found.

-Everything works fine according to different testings implemented in the main method for Person() class, Bankstaff() class, Animal()class. For the Petstore() class, every method was implemented but one error from the return value of Petstore.getAnimal returns null.

-All methods for each class have be properly implemented

-I spent about 12 to 14 hours in total doing all the questions.

The PetStore class creates an array of type Animal from the Animal class.
It uses its methods to also implement its own methods
