Assignment Status:
-The testings are implemented in the main method. The main methods which contains all the
testing for each class, reports errors if found.

-The Animal and Staffmember classes from the test cases work alright, the Manager class is implemented as well an
d test cases works well
-The changes made to the PetStore class provided for A4 works fine, some test cases were added to make sure
the changes don't cause damage to the program.

-All methods for each class have be properly implemented

-I spent about a week and half(10days) which is about aproximately 240hours in total doing all the questions.
along the run i was preparing for this class midterm and other class midterm which made the hours to implement
and finish this assignment longer.

-For the PetStoreSystem, all the function were correctly implemented with the scanner for console user input.
The showEmptyKennel() and releaseAnimal() were not implemented as instructed in the requirements which was lef
t as a stub.
The main method asks the user for console input and correctly displays all the information.
